

# Optatives in East Caucasian morphology and culture

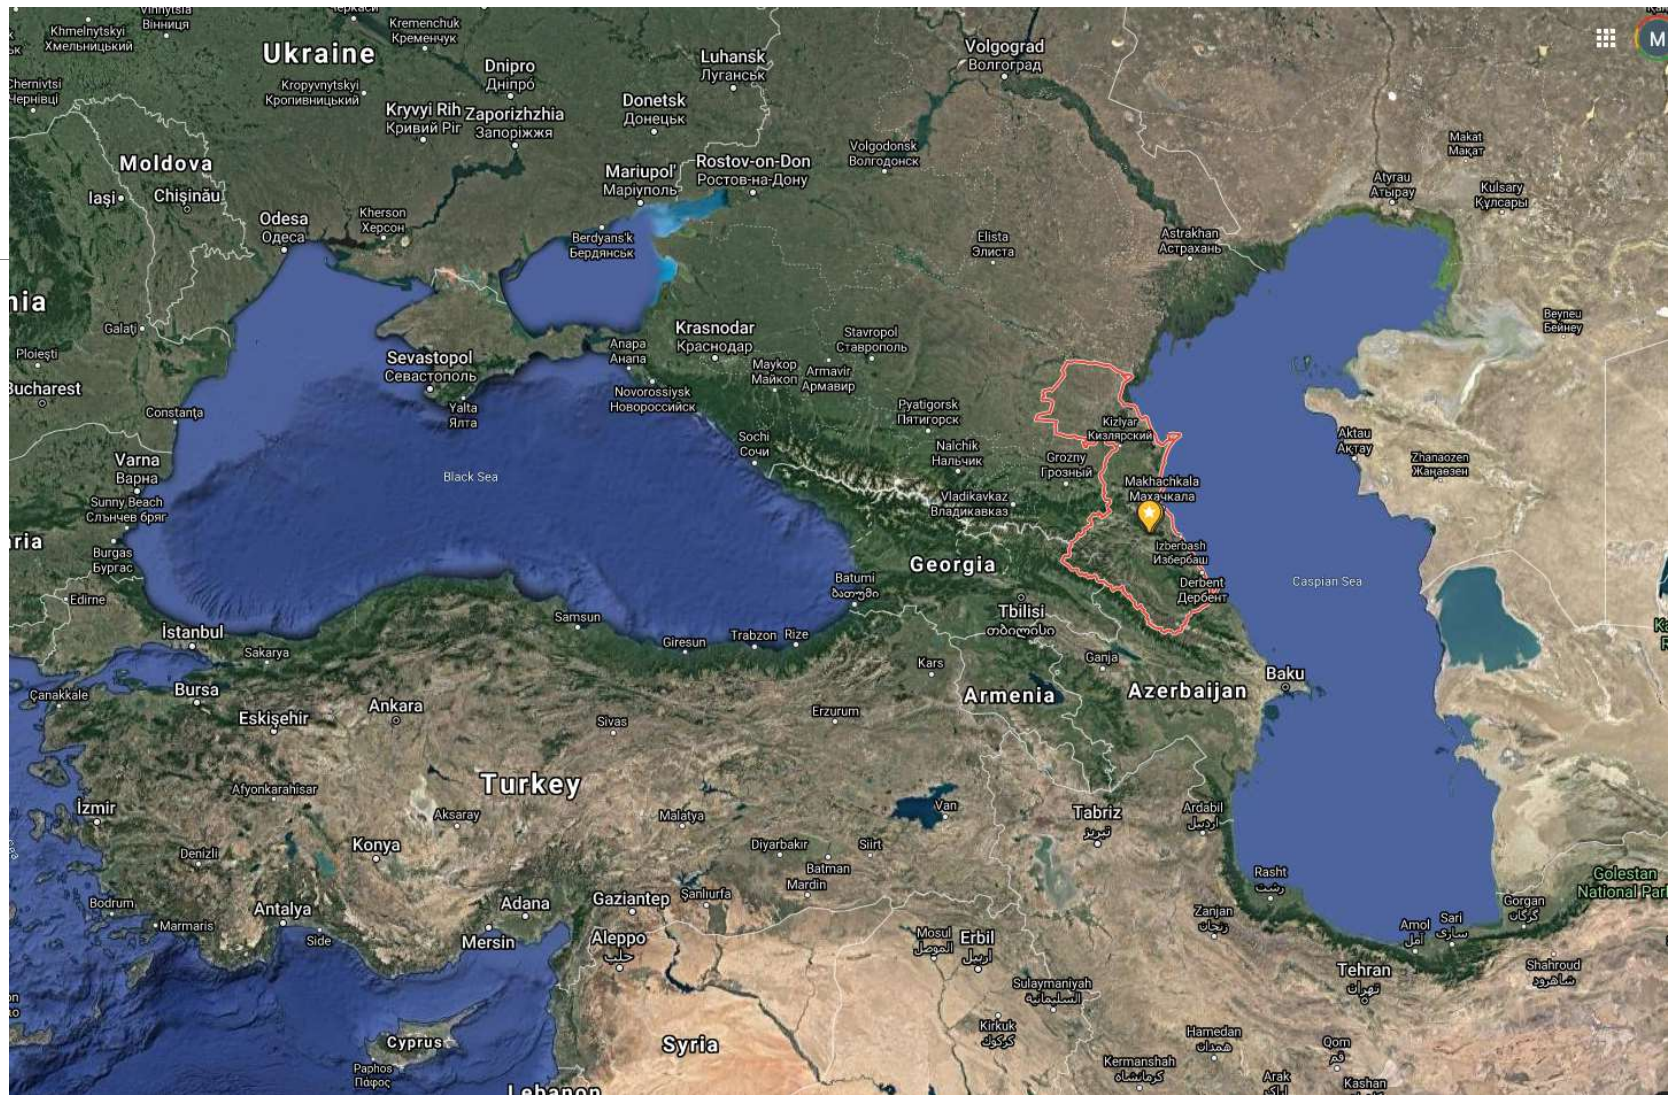

---

NINA DOBRUSHINA

HSE UNIVERSITY, MOSCOW

**ONLINE COURSE ON EAST CAUCASIAN LANGUAGES-2021**

LINGUISTIC CONVERGENCE LABORATORY

# Daghestan

- **General location:** Northeast Caucasus, Russian Federation, borders with Chechnya, Georgia and Azerbaijan
- **Landscape:** Highlands, mountain ridges
- **Economics:** Diverse geography and economy (lowlands rich and fertile, mountains poor)
- **Density:** Over 40 languages on a territory of ~50,000 km<sup>2</sup>
- **Diversity:** Three language families (**Nakh-Daghestanian (East-Caucasian)**, Turkic, Indo-European). Even related languages are considerably different
- **Beyond Daghestan:** several Nakh-Daghestanian languages are spoken in modern Azerbaijan

Optatives: forms dedicated to express a wish or a hope of the speaker that something would (not) happen

---

Rutul (Kina dialect, Nakh-Daghestanian)

hiχ-di      raq'    **w-iš-ij**

good-ATR    way    **3-be-OPT**

'Have a safe journey!'

Ingush (Nakh-Daghestanian; Nichols 2011: 278)

adamaa                    t'y my                    **joaghiila**                    yz      biisa

human\_being.DAT on NEG                    **J.come.OPT3**                    DEM    night

'May no other person ever experience such a night.'

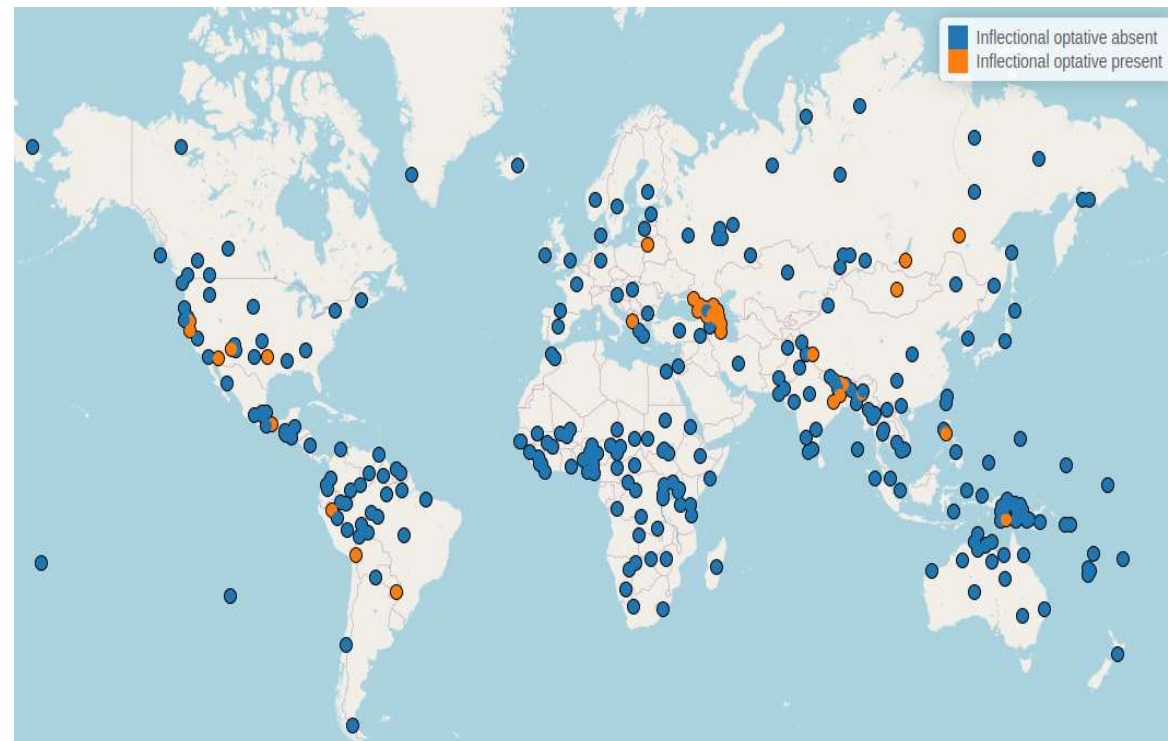

# Optative is a typologically rare phenomenon

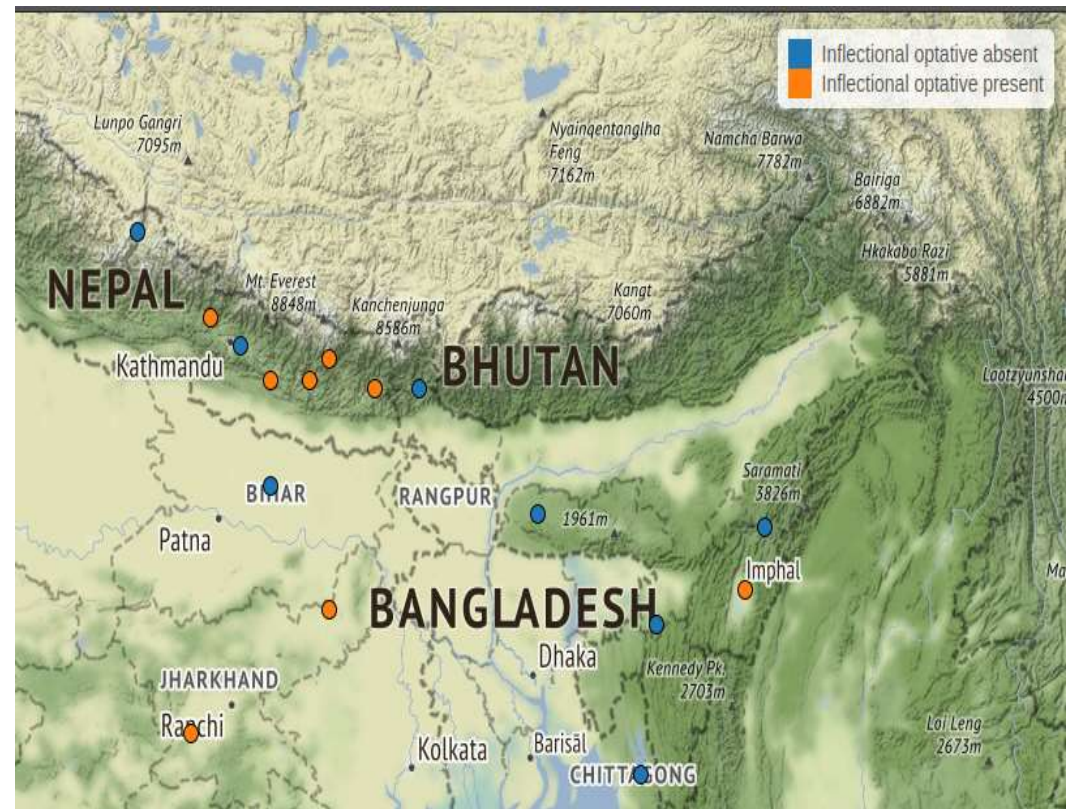

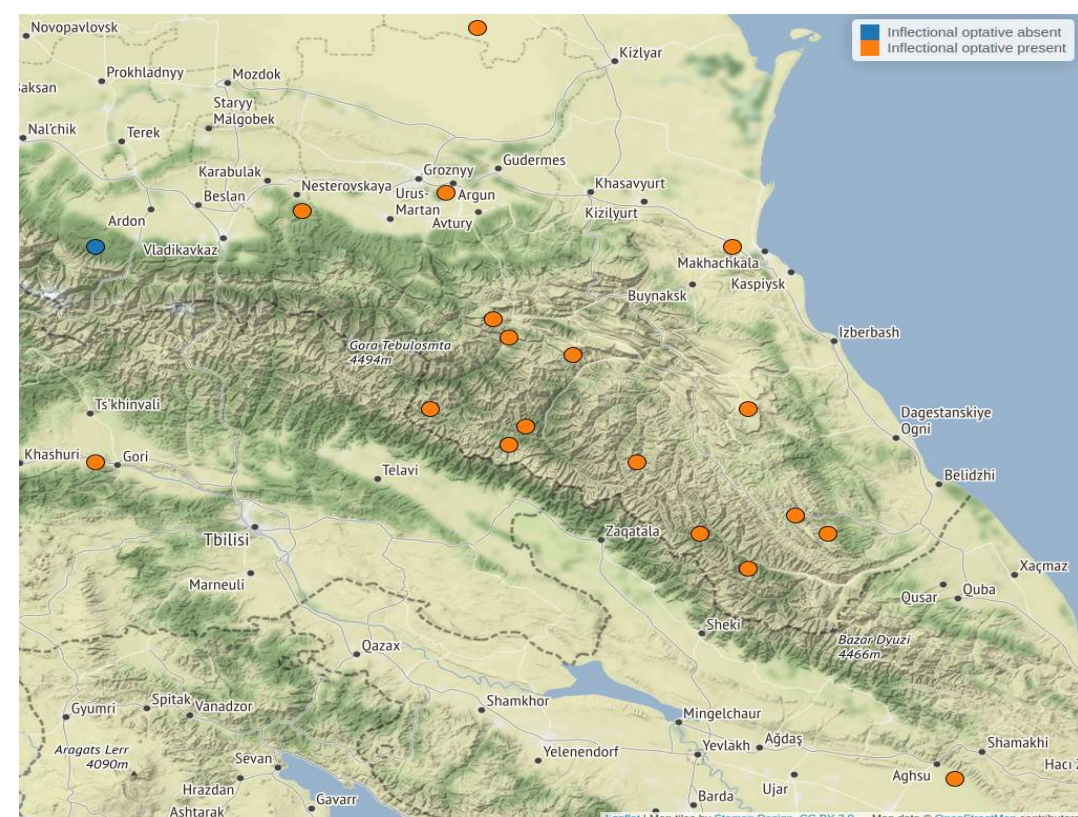

Found in 48 languages out of 319 languages of the worldwide sample

(sample biased towards the Caucasus)

Dobrushina, N., J. van der Auwera, V. Goussev. 2013. The Optative. In: Dryer, M. S. & Haspelmath, M. (eds.) **The World Atlas of Language Structures Online**. Leipzig: Max Planck Institute for Evolutionary Anthropology.

# Two areas rich in Optatives – the Caucasus and northern India & Nepal

# Inflectional optative present in almost every language of the Caucasus

---

45 languages in the database

4 languages have no inflectional optative: Armenian,  
Ossetic, Azerbaijani, Archi

**Optatives are the ONLY morphosyntactic feature found  
in ALL families present in the Caucasus, including Indo-  
European and Turkic (newcomers to the area)**

Optative is present in Caucasian languages of different families, including those where inflectional optative is otherwise uncommon

---

Indo-European family – 3 of 30 in WALS

Turkic family – 3 of 14 in WALS

# Inflectional Optatives in the Caucasus: every hallmark of contact origin

---

Inflectional Optatives are

- ✓ a typologically rare phenomenon
- ✓ present in almost every language of the Caucasus, some languages even have two inflectional Optatives
- ✓ found in languages of different families, including those where inflectional optatives are rare outside the Caucasus: Indo-European (Tat) and Turkic (Kumyk, Nogay, Balkar)
- ✓ may use unrelated (non-cognate) material within the same family

# Why optatives are so *contagious*?

---

Blessings and curses make part of everyday speech practices, such as greetings, farewell, curses, congratulations, condolences

# More tangible evidence: plenty of wishes in the dictionaries as examples in dictionary entries

---

|                    |  |      |
|--------------------|--|------|
| Standard Dargwa    | Yusupov (2014), 37 157 entries –             | 271  |
| Karata             | Magomedova & Xalidova (2001), 8000 entries - | 106  |
| Avar               | Gimbatov (2006), 36 000 entries -            | >200 |
| Lak                | Abdulaev (2015) –                            | 166  |
| Tsakhur            | Ibragimov & Nurmamedov (2010) –              | 40   |
| Tabassaran -       | Xanmagomedov & Shalbuzov (2001) –            | 74   |
| Kumyk -            | Bammatov (2013) –                            | 101  |

| <b>To compare:</b> |  |      |
| Russian -          | Ozhegov & Shvedova (1999), 80 000 entries    | ~20  |

# The range of situations which require wishes:

---

Kubachi: when one meets a blind person - it:i š:ala hak 'May your sight come back to you!'  
when one has got new clothes - čax aral but:ab! 'Let it be worn (out) in health!'

Kumyk: of a stubborn person - q:aq: bolup q:alsyn! 'May s/he turn to stone!'

Tabasaran: if one eats too much - aɣu ip'riwu! 'May you eat poison!'

Avar: when a small child dies - alžan q'ač'aze araw watagi! 'May s/he prepare heaven for you!'

Lak: when you interrupt someone - wilas:a nic'al q'uq'in 'May your speech be interrupted by honey!'

Lak: towards children who continue playing outside late into the evening (jokingly) - šapa-šap:aj  
q'ahajmi q:øʁmawč:itral bøʁq'annaw (bukannaw) 'May those who do not want to come home be eaten  
by fierce cats!'

when the person who wishes good mistakenly chooses an inappropriate word - dak'nijmur  
xunnaw, mazrajmur q:axunnaw! 'Let it happen what is in the heart rather than what was said by ways  
of a lapse of the tongue'

# Shared discourse forms enhance borrowing of grammar

---

“The sharing of discourse forms, which can be motivated on political and cultural grounds, **mediates** the borrowing of grammatical forms” (Beier, Michael, & Sherzer 2002)

“It may not be the grammatical structures themselves that are transferred, **but the rhetorical precursors to them**, increased tendencies to choose certain patterns of expression, that can set the scene for subsequent grammatical developments.” (Mithun 2012)

# Logophoricity in Africa, Nikitina 2017

---

- There is no evidence that **individual logophoric markers have been borrowed directly** from one language to another: it is often a result of independent innovations
- Rather than spreading through direct contact, **logophoricity develops independently** in certain areally prominent genres of discourse
- The spread of folktales, along with storytelling practices, is a likely channel for such indirect borrowing

# Optatives diffused in the Caucasus due to sharing of discourse forms

---

- The genres of blessings and curses spread all over the Caucasus as a part of everyday communicative practices
- Inflectional optatives were typical of some indigenous families
- Inflectional optatives could be lost and renewed because of their utmost importance and contact with adjacent groups
- Languages of non-indigenous families (Turkic and Indo-European) developed or rather kept inflectional optatives due to the necessity to express the genres of blessings and curses

# Roadmap of the presentation

---

- Presence of optatives in the languages of Daghestan
  - Their functional scope
  - Their grammaticalization paths
  - Their syntax
- 
- What *exactly* is shared in language contact?

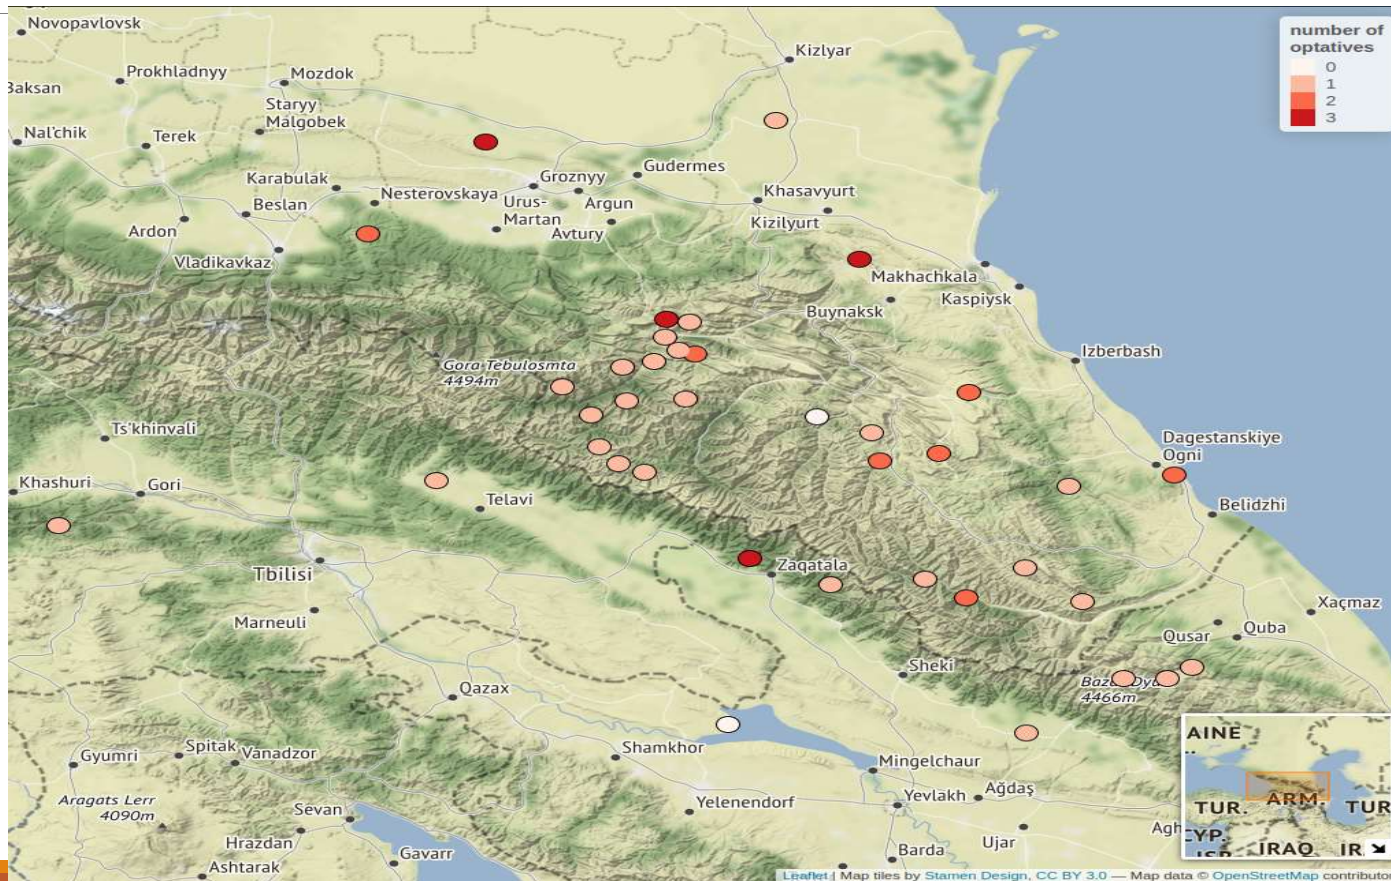

# Some languages of Daghestan have two or even three inflectional optatives

---

Ashty, Avar, Karata, Kubachi, Kumyk, Itsari/Sanzhi, Lak, Shiri, Standard Dargwa, Tanty, Tat

Sometimes with a clear semantic contrast, more often apparently synonymous

# Number of dedicated optatives in the languages of Daghestan: from zero to three

# Functional scope: Optatives in ND languages always express blessings and curses

---

Itsari (Dargwa) (Sumbatova & Mutalov 2003: 97), blessing

*salamat*

*w-irq'-ab*

good

M-do:IPF-OPT

'Happy journey!'

Bagvalal (Avar-Andic, Dobrushina 2001: 327), curse

*biš:di*

*žuzah-i-λ:*

*c'aj-la-ni*

*c'ahi-la*

you.pl

hell-OBL-GEN

fire-LOC-IN

burn.1MP-OPT

'May you burn in the hellfire!'

blessings & curses  
 (strong/ performative optative)      VS      dreams & hopes  
 (weak/ desiderative optative)

## Optative, blessing

## Irrealis, hope

|                                  |                                 |
|----------------------------------|---------------------------------|
| xinix                            | <b>ž-eši-r-i-jden!</b>          |
| child                            | <b>NEG-cry.PFV-CVB-COP2-IRR</b> |
| 'If only the child did not cry!' |                                 |

Optative, curse

|                                    |               |
|------------------------------------|---------------|
| ulaba-xla                          | sug-aj        |
| eye.OBL-SUB.EL                     | disappear-OPT |
| 'May s/he disappear from my eyes.' |               |

# Two semantically different inflectional optatives: Kumyk (Turkic)

---

Kumyk, blessings and curses Optative

sen                    **süjün-gür**

you.SG              **be.glad-PFM.OPT**

‘Live merrily!’ (‘May you be glad!’)

Kumyk, dreams and hopes Optative

sen    onu    **al-ɰaj**                    **e-di-ŋ**

you.SG 3SG    **take-DES.OPT** **AUX-PST-2SG**

‘You’d better take him [your son] with you.’

# Optative in Nakh-Daghestanian languages often combines blessings and curses with 3<sup>rd</sup> person command

Rutul (Dobrushina, field data)

- (3)        *zi / wi / had*                *sak*        *r-iš-ij*  
             I/ you/ that                healthy   **2-become-OPT**  
May I / you / she be healthy.

- (4)        *said-a*                        *uq'*        *sej-ij*  
             Said-ERG                        grass        **mow-OPT**  
Said should mow the grass.

- (5)        *\*wa-d*                        *uq'*        *sej-ij*  
             you-ERG                        grass        **mow-OPT**  
You should mow the grass.

|   | Blessings and<br>curses | 3 <sup>rd</sup> person<br>command |
|---|-------------------------|-----------------------------------|
| 1 |                         |                                   |
| 2 |                         |                                   |
| 3 |                         |                                   |

# Some languages have separate forms for these functions

---

Mehweb Dargwa (Dobrushina 2019)

**Optative, available with 1/2/3 person subject, blessings and curses**

|                                |              |                   |
|--------------------------------|--------------|-------------------|
| d-arš-ib-i                     | kalʔ-a-b     | nu / ħu / dursi   |
| F1-be.beautiful:PFV-AOR-PTCP   | stay-IRR-OPT | I / you.SG / girl |
| 'May I/you/girl be beautiful.' |              |                   |

**Jussive, available with 3<sup>rd</sup> person subject only, 3<sup>rd</sup> person command**

|                      |                |
|----------------------|----------------|
| Musa uz-e            | bet'-a         |
| Musa M.work:IPFV-IMP | say:PFV-IMP.TR |
| 'Let Musa work.'     |                |

# Mehweb jussive is not used to express wishes

---

## Optative

aradeš      **g-a-b**

health      **give:pfv-irr-opt**

‘May [Allah] make [you] healthy!’

## Jussive

The following sentence can only be uttered by an atheist who thinks that God can be forced to perform an action:

??aradeš      **ag-a**      **bet’a**

health      **give:pfv-imp.tr**      **tell:ipfv-imp.tr**

Intended: ‘Let [Allah] make [you] healthy.’

# Mehweb optative is not used to express 3<sup>rd</sup> person command

---

If the optative is derived from a verb which typically denotes controllable actions, the sentence is interpreted as a wish that Allah fulfills the action.

The following example can be interpreted as a wish which can be made real by Allah, but not as an indirect command to the third person to give money:

|              |       |                         |
|--------------|-------|-------------------------|
| d-aq-il      | arc   | <b>g-a-b</b>            |
| NPL-much-ATR | money | <b>give:PFV-IRR-OPT</b> |

‘May you be given [by Allah] a lot of money.’

(Dobrushina 2019: 144)

# Grammaticalization paths

## Sources of Nakh-Daghestanian optatives

---

### Stem

- imperative-based
- other

### Suffix

- say-based
- participle-based
- unknown

# Imperative-based optatives

---

In some ND languages, the optative is based on the **imperative**

Avar:

*χut'a* 'stay. IMP' - *χut'a-gi* 'stay.IMP-OPT'

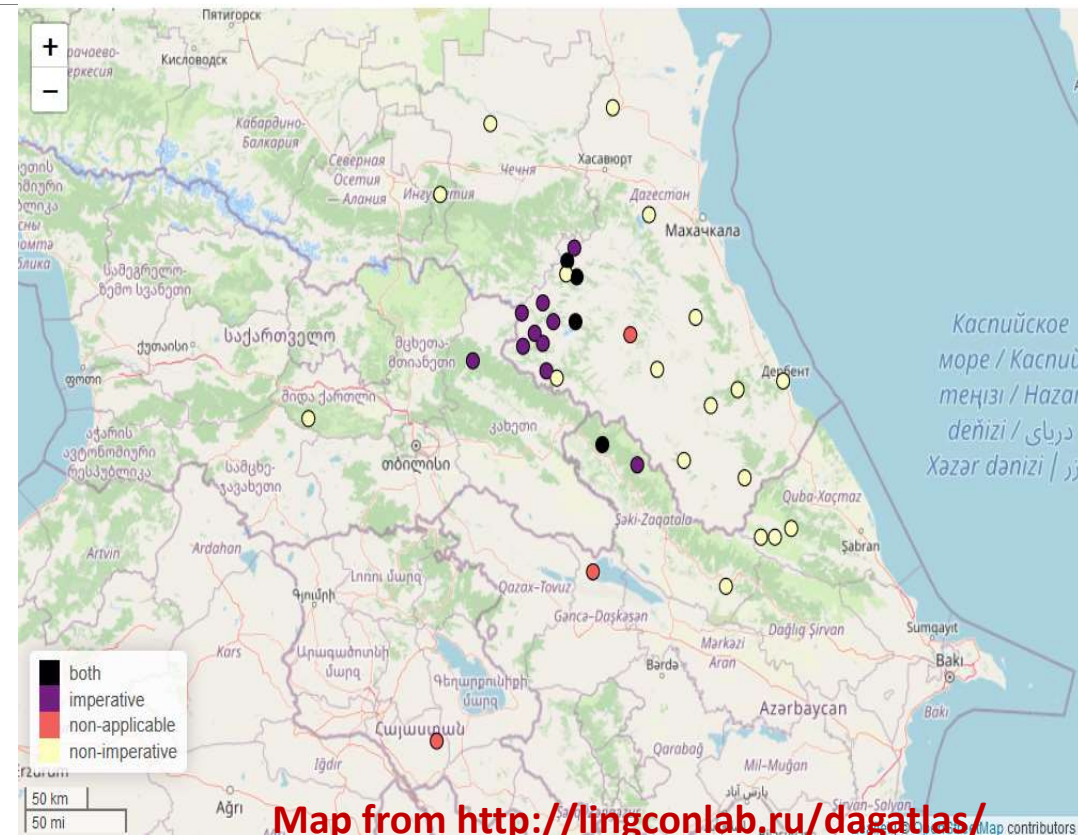

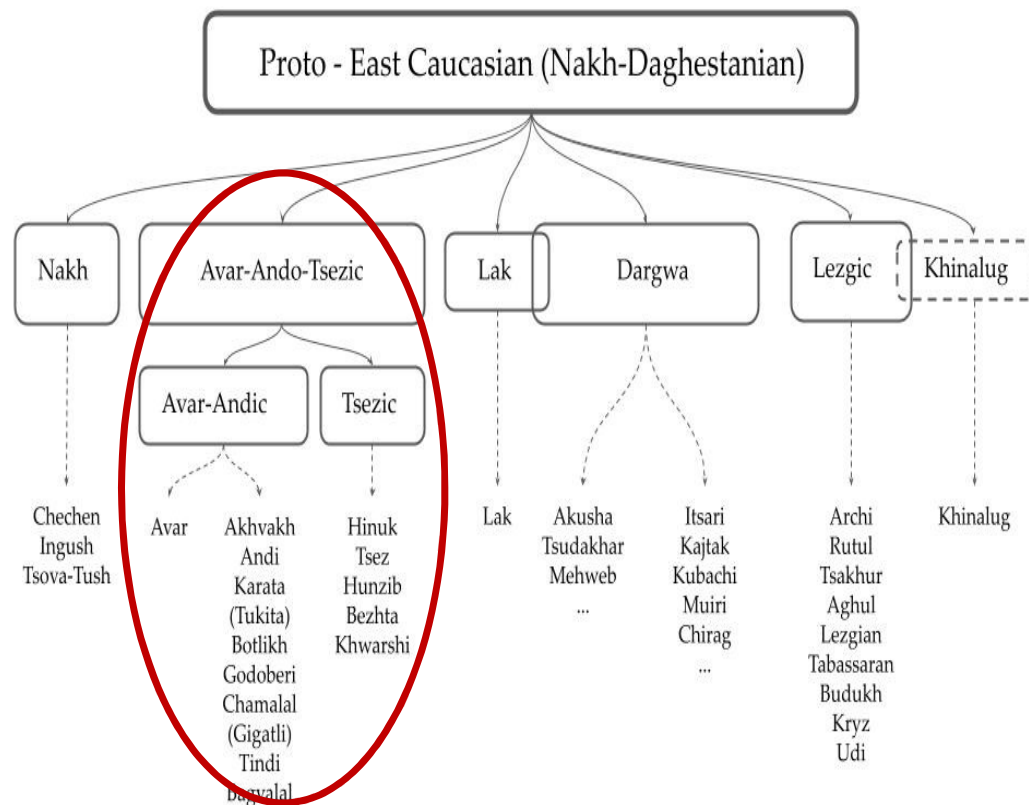

(Alekseev et al. 2012: 224-225)

To a certain extent, the geographical distribution coincides with the genetic one:

all Avar-Ando-Tsezic languages have imperative-based optatives.

But also Tsakhur (Lezgif) and Tsova-Tush (Nakh)

# Imperative-based optatives

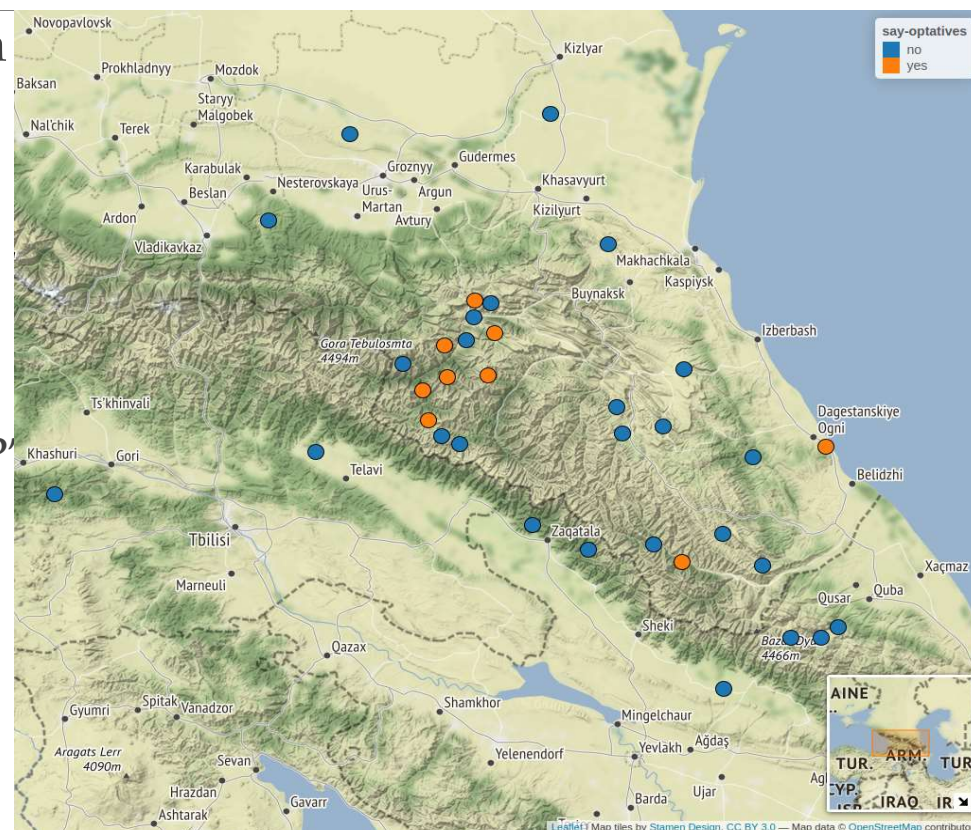

# Optative suffix is derived from 'say'

In some languages, the optative suffix is derived from the imperative of 'say' (Authier 2015)

|           |                             |                   |
|-----------|-----------------------------|-------------------|
| Khwarshi: | šešo-λo 'stick.IMP-OPT'     | - iλo 'say.IMP'   |
| Hinuq:    | kekir-λo 'send.IMP-OPT'     | - eλo 'say.IMP'   |
| Tsez:     | baj-λ 'come.IMP-OPT'        | - eλo 'say.IMP'   |
| Karata:   | b-ek:a-λ'a 'N-give.IMP-OPT' | - keλ'a 'say.IMP' |

In most of these languages, the optative suffix is attached to the imperative stem.

# Optative suffix is derived from 'say'

---

All 'say'-optatives also express  
3<sup>rd</sup> person command

|   | <b>Blessings and<br/>curses</b> | <b>3<sup>rd</sup> person<br/>command</b> |
|---|---------------------------------|--|
| 1 |                                 |  |
| 2 |                                 |  |
| 3 |                                 |  |

# Say-forms only for jussives

In some languages, the form based on 'say' does not express wishes and is used exclusively for 3<sup>rd</sup> person command:

|   | <b>Blessings<br/>and curse</b> | <b>3<sup>rd</sup> person<br/>command</b> |
|---|--------------------------------|--|
| 1 |                                |  |
| 2 |                                |  |
| 3 |                                |  |

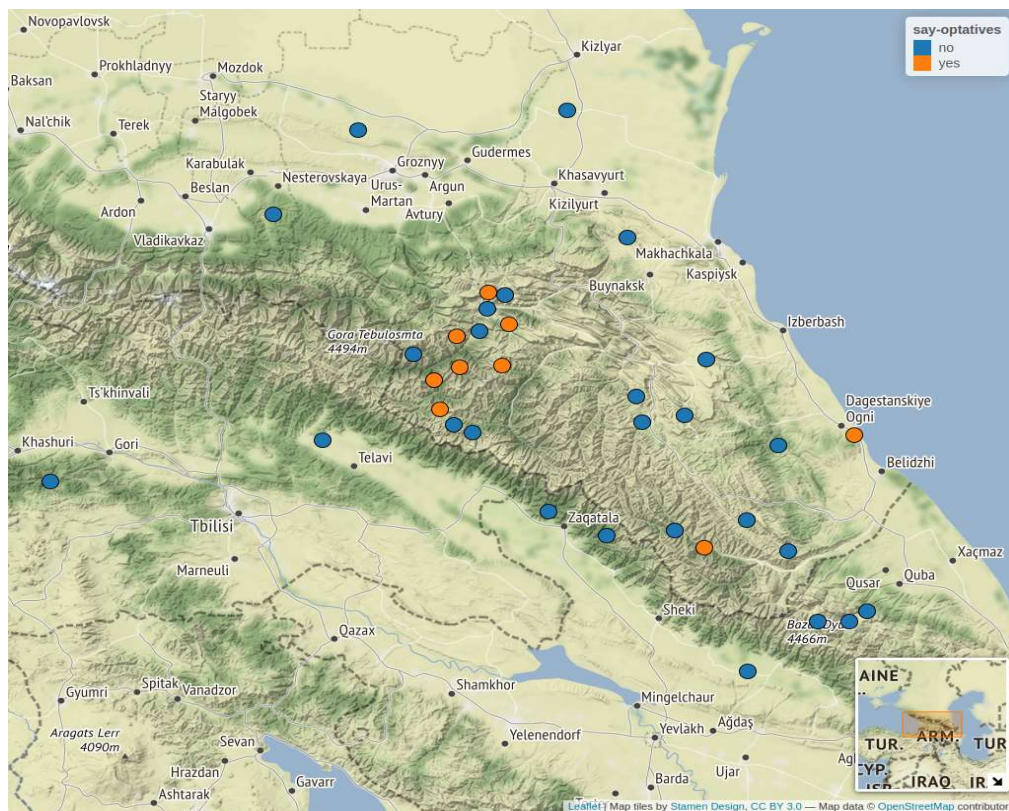

Archi

ba:c'i ba 'fill.IMP say.IMP' – 'Let him fill'

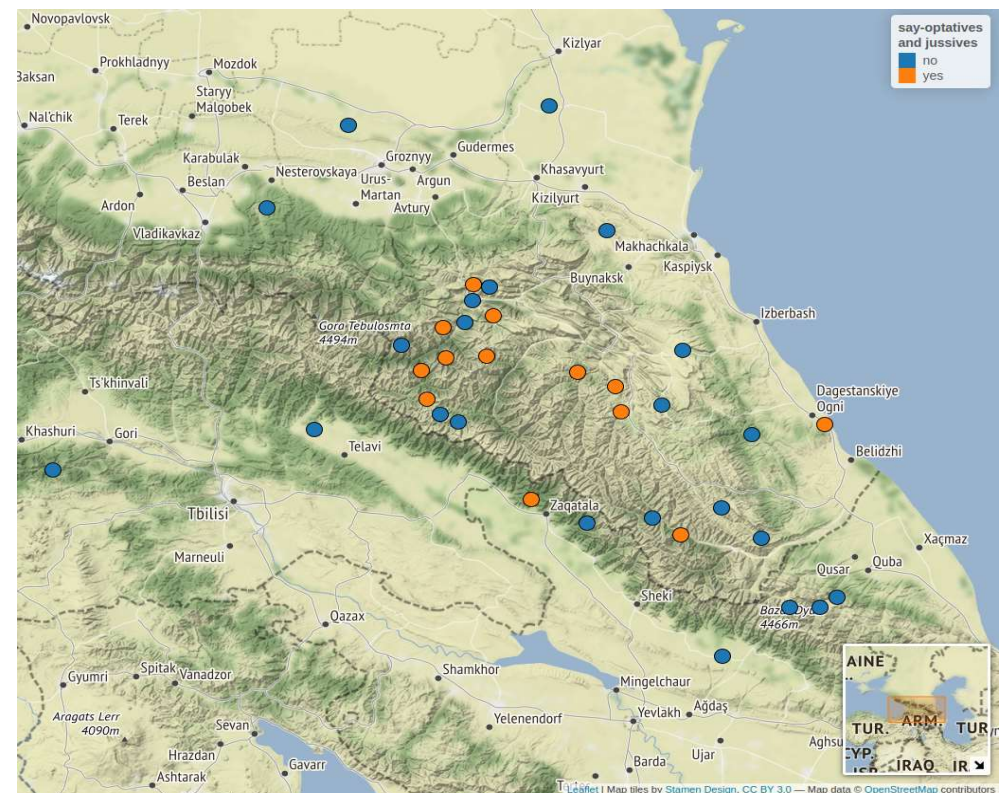

Lak

nasu-ča 'go.IMP-say.IMP' – 'Let him go'

# Say-optatives

# Say-optatives and say-jussives

# Possible path of grammaticalization of say-optatives: from Jussive to Optative

---

1) The construction of two imperatives is used to express 3<sup>rd</sup> person command:

he.CASE go.IMP tell.IMP lit. 'to.him "Go!" tell!'

2) **Jussive stage:** The construction is reanalyzed by changing the case marking of the main participant (in Mehweb, from interlative – encoding of the addressee - to nominative / ergative) / acquires new meanings (permission, indifference; allows inanimate subjects)

he.NOM go.IMP tell.IMP lit. 'he "Go!" tell' = 'Let him go!'

3) **Optative stage:** Extends to the meanings of blessings and curses with 1/2/3 person subjects

he.ERG go-OPT 'Make / let /may him/he go (to hell)!'

At the 2<sup>nd</sup> or 3<sup>rd</sup> stages *tell.IMP* may undergo reduction.

# (Non)imperative stems and (non)say suffixes

| stem           | suffix    | languages   | example                                |
|----------------|-----------|---|--|
| imperative     | 'say.IMP' | Akhvakh, Chamalal, Godoberi, Hinuq, Karata, Khwarshi, Tindi, Tsez | Karata<br>b-ek:a-ǰ'a<br>3-give.IMP-OPT |
| imperative     | other     | Andi, Avar, Bagvalal, Bezhta, Tsakhur, Tsova-Tush                 | Bagvalal<br>c'ahi-la<br>burn.IMP-OPT   |
| non-imperative | 'say.IMP' | Tat, Mukhad Rutul   | Tat<br>bu-ra-v-gu<br>SUBJ-go-3-OPT     |
| non-imperative | other     | many  |  |

# Optatives from participles

In Archi, Akhvakh, and Rutul participles are used with optative meaning

**Archi** (participle, agreement the with nominative, own field data)

wiš                      lobur                      c'ullij                      **e<b>t:i-t:-ib!**  
you.sg.GEN      child.PL be.healthy      <HPL>become.PFV-ATR-PL  
'May your children be healthy!'

Also found in  
Karata

**Kina Rutul** (participle, agreement with the nominative, own field data)

hiχ-di                      raq'                      w-iši-d  
good-ATR                      way                      3-be-ATTR  
Have a nice trip!

**Akhvakh** (participle, agreement with addressee, Creissels (ms); pc with Indira Abdullaeva)

du                      jaše-ɬ:a                      talaɬi                      ox-ada-je  
your      daughter-DAT      luck                      give-PTCPL-F  
'May your daughter have luck!' (said to a woman)

# In Tsakhur, the optative contains the attributive suffix

---

Tsakhur (agreement with nominative, Ibragimov & Nurmagomedov 2010)

|                   |               |
|-------------------|---------------|
| baxt-u-ka         | ixe-na        |
| luck-OBL-COMIT    | become-ATTR.A |
| May [he] be happy |               |

In Tsakhur, the attributive suffix **is attached to the imperative**

|   |                  |
|---|------------------|
| bol   | q-ixe-n          |
| richness                                    | PV-become-ATTR.N |
| May s/he become rich (lit. richness become) |                  |

|   |       |                   |
|---|-------|-------------------|
| jurd-ubu  | k'ar  | q-ixaj-nmi        |
| home-PL   | black | PV-become-ATTR.PL |
| 'May the whole clan turn to ashes!' (lit. 'let the houses blacken') |       |                   |

# Avar, Lak, and Aghul have dedicated optative participles

---

Lak, form in –iwu- (pc with Rosa Eldarova)

ars-nal,      qinnu uč'-iwu-l,      čakar b-u<w>k'-unn-i  
son-GEN      PTCL M.come-OPT-GEN letter 3-3.come-PST.CVB-AOR  
'The letter came from my son, may he come back safely.'

ta      q:atta č:uč:-iwu-x      maq busi  
that house burn-OPT-LOC      word say.IMP  
'Say something to this one, may her house burn down'

# Other nominal optatives

Apart from the optative participle, Dargwa languages also have a nominal optative (in some sources – “optative nouns”). They are zero-marked, carry no personal endings, and can be used either as the main predicate in a clause or as arguments with case endings.

Tanty Dargwa (Sumbatova & Lander: 132-133)

|     |           |                      |
|-----|-----------|----------------------|
| ʒuʃ | allah-li  | w=at                 |
| you | Allah-ERG | <b>M=keep:PF.OPT</b> |

‘May you be kept by Allah!’

|        |           |               |        |                   |
|--------|-----------|---------------|--------|-------------------|
| sa=j   | allah-li  | w=at-la       | kulpat | b=erq-ab!         |
| self=M | Allah-ERG | M=keep:PF-GEN | family | N=blossom:IPF-OPT |

‘May the family of this man, may God keep him, blossom!’

# Why verbal adjectives and verbal nouns act as optatives? Why optatives have nominal features?

---

Sumbatova & Lander (2010: 409 – 410, 415, 421, 428):

**the optatives**, together with exclamatives, **are thematic**, because they express unexpected information (no topical component).

**Thematic** judgement - logically unstructured, presenting a fact as an inseparable unit. This is opposed to the classical bipartite subject-predicate structure of a judgment which constitutes of two successive acts: naming an entity and making a statement about it.

# Inflectional optative present in all languages, but one - Archi

---

- **Archi** is one-village language spoken in central Daghestan
- Genetically belongs to Lezgif group, but geographically and culturally is separated from Lezgif languages for many hundreds of years
- Archi grammar underwent significant changes as compared to its closest relatives (geographically, Tsakhur and Rutul)
- The village of Archi is located close to Avar and Lak villages
- Archi people were bilingual in both Avar and Lak
- The Archis associate themselves with Avars, but are well aware of the uniqueness of their language

There is no dedicated inflectional optative in Archi, but blessings and curses are as prominent as in any other local cultures

---

Blessings and curses are expressed by 2<sup>nd</sup> person imperative or prohibitive.

lobur,            nokɫ'-a-ši        zaba  
child.PL        house-IN-ALL **come.IMP**

‘Children, go home!’

lobur            χ:<sup>w</sup>ara-ši        zaba  
child.PL        be.glad-CVB    **come.IMP**

‘May the children come back joyfully!’ (lit. ‘Children joyful come back’)

# When used as optative, the imperative and prohibitive are available for all persons

---

zon/ un/ wit lo

I/YOU/YOUR SON

‘May I/you/ your son become clever!’

c’at’ur-t:u

be.clever-ATR.I

k<sup>w</sup>-a!

**I.become-IMP**

This pattern is also found in some Avar-Ando-Tsezic languages: imperative and prohibitive can be used as optatives, and in this function they are available for all persons

---

Botlikh (example from Saidova & Abuzov 2012)

|       |             |                   |       |                      |
|-------|-------------|-------------------|-------|----------------------|
| kapur | adam-i-la   | <b>haκ-abas:i</b> | di:   | haκ-a-b na:          |
| pagan | men-GEN-ADD | <b>see-PROH</b>   | I.DAT | see-PST.PTCP-N thing |

May even a non-believer not see what I have seen.

Karata (Magomedova & Xalidova 2002: 120)

|            |                |           |
|------------|----------------|-----------|
| heλ'i-misa | <b>tor-i</b>   | du-b      |
| mouth-home | <b>rot-IMP</b> | your.sg-N |

May you not be able to speak (lit. May your mouth rot)

# Probable scenario for Archi

---

- Loss of the proto-Lezgic optative (Alekseev 1985)
- Development of a new pattern: 2<sup>nd</sup> person imperative for 1/2/3 persons optative under the influence of the adjacent languages

??? Not found in Avar dictionary

For the Archis, the contact variety was the Charoda dialect of Avar

# Syntax

## Commands

## VS Blessings and curses

---

### IMPERATIVES

2<sup>nd</sup> person: Hearer = Performer

3<sup>rd</sup> person: Hearer ≠ Performer

### BLESSINGS AND CURSES OPTATIVES

2<sup>nd</sup> person: Hearer = Subject of the Wish

3<sup>rd</sup> person: Hearer ≠ Subject of the Wish

**Who is the performer of blessings and curses?**

God help you!

Черт тебя побери!

# In Daghestan, blessings and curses are meant to be performed by Allah or, rarely, by a shaitan

- Allah can be expressed as a vocative:

|                                |              |              |                  |
|--------------------------------|--------------|--------------|------------------|
| <i>ja-allah</i>                | <i>hušab</i> | <i>taliḥ</i> | <i>g-a-b</i>     |
| PCL-Allah                      | you.PL DAT   | luck         | give:PFV-IRR-OPT |
| 'May [Allah] give [you] luck!' |              |              |                  |

- Allah can be an ergative NP in a transitive construction:

|                                |                |                  |
|--------------------------------|----------------|------------------|
| <i>allah-li</i>                | <i>ara-deš</i> | <i>g-a-b</i>     |
| Allah-OBL(ERG)                 | healthy-NMLZ   | give:PFV-IRR-OPT |
| 'May Allah give [you] health!' |                |                  |

- It may not be expressed overtly (but come up in the translation):

|   |                  |
|---|------------------|
| <i>aradeš</i>   | <i>g-a-b!</i>    |
| health  | give:PFV-IRR-OPT |
| 'May [Allah] give [you] health!' (Mehweb Dargwa; Dobrushina 2019) |                  |

# In some languages, the ergative of Allah can appear in intransitive constructions

---

Rutul (Kina dialect)

allah-a-ra                      wa-s                      duχ    hiš-ij

Allah-OBL-ERG    you-DAT    son    1.become-OPT

May you have a son with the help of Allah (lit. May *by Allah* a son be to you)

Semantically, situations with one or two participants are equally controlled by Allah => In some languages it makes its way to the syntax

# One parallel in other language

---

Jóola Fóoñi (Senegal) has developed a dedicated optative construction which is biclausal and whose matrix clause is *ɛmitɛy ɛkaan* ‘Let God make (that)...’. The construction is being reanalyzed as **monoclausal**, and the former matrix clause acts as an **optative particle** (Creissels & Bassène 2022):

*ɛmitɛy ɛkaan ɛmitɛy ɛbɔncɛtɔɔ!*

|  |             |        |                      |
|--|-------------|--------|----------------------|
| ɛmitɛy   | ɛ-kaan      | ɛmitɛy | ɛ-bɔncɛt-ɔɔ          |
| God(E)   | sI:clE-make | God(E) | sI:clE-forgive-I:clA |
| lit. ‘Let God make that God will forgive him/her!’ |             |        |                      |

# Contact

“The sharing of discourse forms, which can be motivated on political and cultural grounds, **mediates** the borrowing of grammatical forms” (Beier, Michael, & Sherzer 2002)

---

What exactly spreads via language contact?

Optative *forms*      OR      wish *formulae*?

# What exactly spreads via language contact?

---

## Optative forms

- Material borrowing
  - Optative suffixes
- Structural borrowing (grammatical calquing; grammatical replication)
  - Grammaticalization path?

## Wish formulae

- Material borrowing
  - Wish expressions as a whole or partially
- Constructional borrowing (lexical calquing; lexical replication)
  - Structure of wish formulae?

# Optatives: material borrowing?

---

## No convincing cases of affix borrowing

Avar optative suffix –gi is not found in any other languages, as well as Lak –nnaw and –iwuj;  
Lezgian –raj is the same as Aghul –raj, but the languages are closely related (cf. Tabasaran –ri)  
Kumyk -ɣur/-ɣyr/ gür/ gir; -syn, sin, sun; -ɣaj / -gej + edi are not found in other languages

Closely related languages:

Khwarshi, Hinuq, Tsez –

-ɣo, -ɣo, -ɣ (<say)

Karata, Akhwakh, Godoberi, Chamalal, Tindi -

- ɣ'a (<say)

# Optatives: structural borrowing

---

YES

say.IMP pattern is likely to have spread by contact

- say.IMP optatives spread to all Avar-Ando-Tsezic languages
- say.IMP jussives are found in Lak, some Dargwa varieties (Mehweb, Shiri), Archi
- Are less typical for Southern Daghestan:
  - Found in Judeo Tat and Mukhad Rutul
  - Not found in Lezgian, Aghul, Tabasaran, Kina Rutul, Tsakhur, Kryz, Budukh, Khinalug, Udi

# Optatives: structural borrowing

---

Probably also the usage of imperatives and prohibitives for optatives in Avar-Ando-Tsezic languages

# What spreads due to the contact?

## Wish-expressions: database

---

- Extracting examples of wishes from the dictionaries and other sources
- Transcribing and providing word-by-word translation
- Coding for the type of wish (good or bad), situation (if available)

### Team

Nina Dobrushina & Alina Russkikh – supervisors

Ekaterina Akhmedshina – Kubachi, Kumyk

Nikita Beklemishev – Karata, Botlikh

Darja Izmalkova - Avar

Darja Morozova – Standard Dargwa, Lak

# Case study of 'bon voyage'

---

May the road be good / Good road

May the road be straight

May the journey be good

May the journey be for your benefit

Go well

Do well

May the road be open

May success (luck) be

May [?] let the road

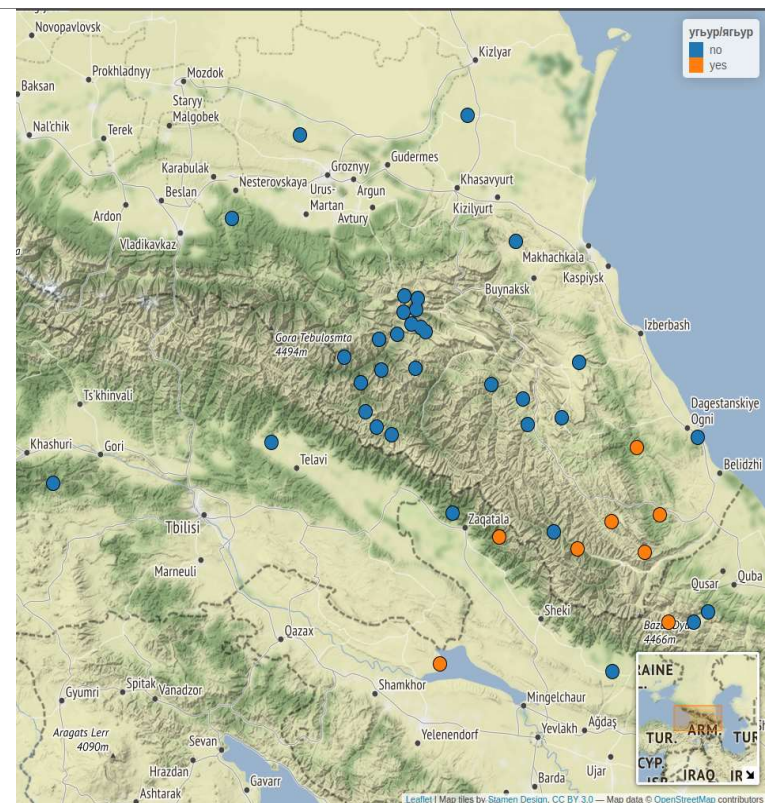

# One clear case of material borrowing

Most Lezgitic languages and Khinalug have expression of wishes of happy travel involving the same Azerbaijani word ‘good luck’.

The speakers of Aghul, Lezgian and Rutul commented that this word “has no translation”

|                           |                       |
|---------------------------|-----------------------|
| Aghul                     | jaʁur xuraj           |
| Tabasaran                 | jaʁur ibšri           |
| Tsinal dialect of Lezgian | jaʁur xuj             |
| Lezgian                   | juʁur xuj             |
| Mukhad Rutul              | uʁur wišij (obsolete) |
| Tsakhur                   | uʁur xen              |
| Khinalug                  | uʁur jaxkkwa          |

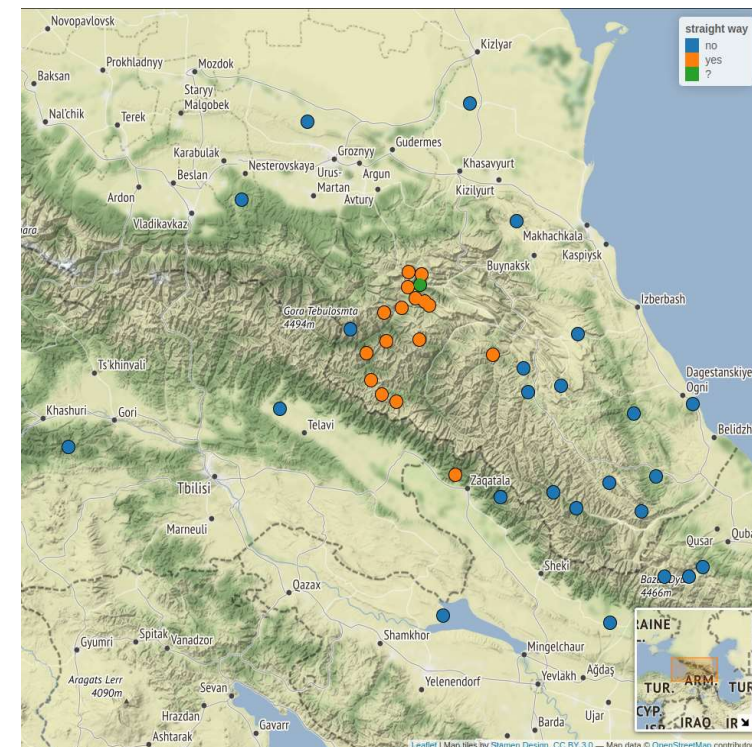

In Azerbaijan, the expression *Yolun uğurlu olsun* ("your.road successful be.JUSS") exists but is not the most common way to wish a nice trip. The expression *uğurlu olsun* means ‘Have luck’, but it is not used as a farewell wish (pc with Murad Sulejmanov).

# One clear case of constructional borrowing

Almost all **Avar-Ando-Tsezic** languages and to some extent **Archi** use the expression with the word meaning ‘straight, right’:

|         |                      |                              |
|---------|----------------------|------------------------------|
| Avar    | nux bit'a-gi!        |                              |
|         | road be.straight-OPT |                              |
| Botlikh | miq'i                | b-it'-ibe                    |
|         | road                 | n-be_straight-opt            |
| Hunzib  | huni bic'i           | r-aq-ob                      |
|         | road straight        | 5-happen-OPT                 |
| Archi:  | same and different   | t'al-ek-mul      ka          |
|         |                      | straight-?-NMLZ 4.become.IMP |

# The case of contact influence in the domain of constructions on a microlevel:

---

Tsez

huni regir-o-λ

road send/let-IMP-OPT

Happy journey! (lit. May [SUBJ] let the road)

Hinuq

hune kekir-λo

road send/let-OPT

Happy journey! (lit. May [SUBJ] let the road)

# Another wide-spread pattern for 'bon voyage'

May the road be good / Good road

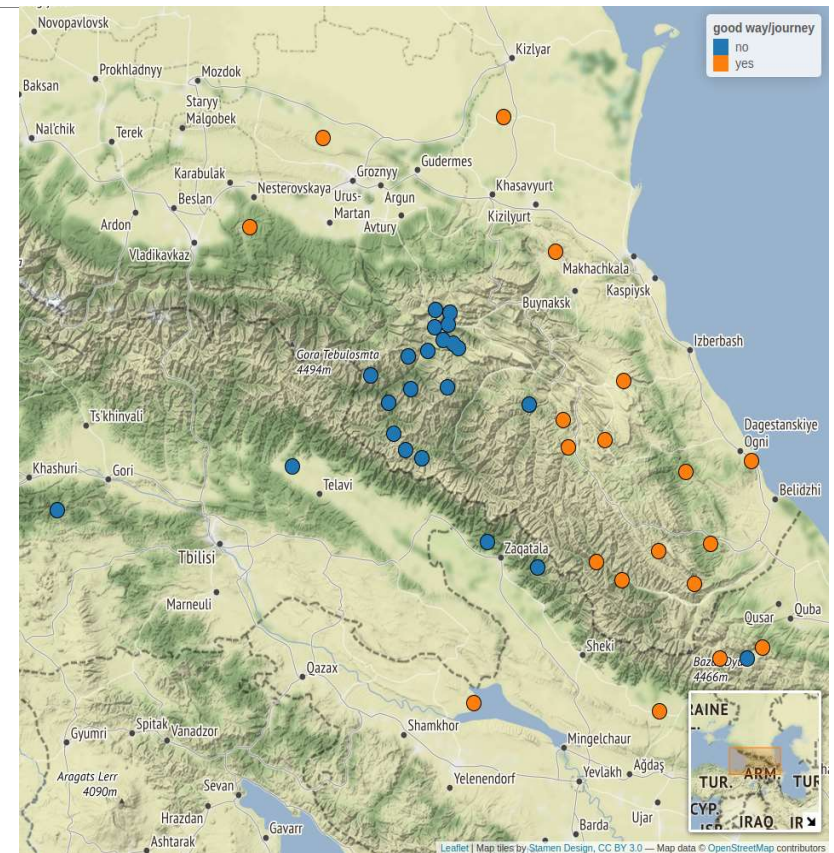

Aghul, Budukh, Standard Dargwa, Mehweb Dargwa,  
Tanty Dargwa, Lak, Lezgian, Rutul, Udi

Chechen, Ingush

Kumyk, Nogay

Armenian, Tat

Too universal

# 'bon voyage' beyond Daghestan

---

|               |                    |
|---------------|--------------------|
| Tsova-Tush –  | God's peace to you |
| Georgian –    | Kind journey       |
| Adyghe -      | Happy road         |
| Abaza -       | Good road          |
| Armenian -    | Good road          |
| Azerbaijani – | Good road          |

# What spread due to the contact?

---

- No material borrowing in the domain of affixes
- Structural borrowing:
  - say-optatives and jussives, area under the influence of Avar plus Lak and Dargwa languages
  - probably imperative-prohibitive pattern in the Avar-Ando-Tsezic area
- Material borrowing from Azerbaijani in southern languages (Lezgic + Khinalug) in the domain of wish-formulae
- Constructional borrowing of wish-formulae:
  - 'May the road be straight' (Avar-Ando-Tsezic languages and Archi);
  - 'May [SUBJ] let the road' (Tsez and Hinuq)

# The same two areas emerge as shared patterns of grammaticalization and as shared constructions, both united by large lingua francas

---

## Lingua franca Avar

Avar-Ando-Tsezic languages + Archi

- say-optatives
- imperatives as optatives
- 'May the road be straight'

## Lingua franca Azerbaijani

Lezgic languages

- less rich systems of optatives
- jakur/ jukur/ ukur in 'bon voyage' farewell wish

Cf. similar results in Naccarato & Verhees 2021: one construction in Avar-influenced area + case of direct borrowing from Avar; another construction in the languages influenced by Azerbaijani

---

## In the domain of inflectional optatives

No evidence of direct borrowing of optative markers

Emergence of optatives is rather a result of independent innovations

BUT shared grammaticalization patterns in the areas united by the same lingua franca

## In the domain of wish formulae

Many independent formulae even in adjacent languages

Evidences of direct borrowing and of constructional copying in the areas united by the same lingua franca

# Acknowledgements
